BALOGUN EZEKIEL OLUWATOSIN

Address: 7B, University Road Abule Oja | Lagos
Phone Number: +2349018391336
Gmail:ezekielbalogun56@gmail.com
Linkedin:http://linkedin.com/in/balogun-ezekiel-474a90323/

Professional Profile

Results-driven **Backend Software Engineer** with hands-on experience designing and leading scalable RESTful APIs using **Python, FastAPI, and Django**. Built secure, production-grade systems with **JWT authentication, PostgreSQL schema design, Alembic migrations**, and **Dockerized deployments**.

Led backend architecture at **Accessivo**, integrating **Topupbox & Clubkonnect** for airtime/data top-ups and authoring the **VFD Microfinance Bank transfer module**. Currently developing core backend for **Onyi Gifting Platform**, a media-rich anonymous gifting system, and enhancing AI workflows as **Prompt Engineer at Outlier**.

Skilled in **clean architecture, defensive coding, Pytest, Cloudinary, and CI/CD** — passionate about building secure, maintainable systems that solve real-world problems.

Skills

Knowledge Domains: Backend Development; RESTful API Design; Database Architecture; Authentication & Security; DevOps & Deployment

Core Skills & Tools: Python; FastAPI; Django; Django REST Framework; PostgreSQL; SQLite; Alembic; Docker; Git; Pytest; JWT; Cloudinary; DBeaver; Render; Heroku

Additional Skills: HTML/CSS; Agile Methodologies; Technical Documentation; OpenAPI (drf-yasg); Linux; AI Prompt Engineering.

Education

University of Lagos

B.Sc. in Mathematics Education

Sep 2019 – Sep2023

Relevant Coursework: Linear Algebra; Differential Equations; Numerical Analysis; Probability & Statistics; Discrete Mathematics; Algorithms.

Work Experience

Accessivo (incubated by Techitcheap), Ilorin
Team Lead (Django)
2025 – Present

Led backend development for a platform offering hands-on virtual internships for aspiring developers. Owned API architecture, data modeling, security, and financial service integrations.

Key Contributions & Achievements:

- Developed and maintained RESTful APIs using Django and Django REST Framework
- Designed scalable PostgreSQL database models and implemented schema migrations using Django ORM
- Built reusable views, serializers, and permission classes to support modular application development
- Implemented JWT-based authentication with role-based access for secure API usage
- Integrated Topupbox and Clubkonnect APIs for seamless airtime and data top-up functionality
- Authored the full Transfer module, enabling fund transfers via VFD Microfinance Bank and other providers
- Secured APIs and web forms against XSS attacks by:
- Sanitizing user inputs using Django's built-in bleach library and strip_tags
- Using Django templates' automatic HTML escaping to prevent script injection
- Avoiding unsafe mark_safe() calls unless strictly necessary and reviewed
- Collaborated with frontend developers to enforce input validation and safe rendering practices
- Enabled CSRF protection and secure headers to mitigate injection and forgery risks
- Built APIs for user profiles, products, and admin actions, with robust filtering and pagination support
- Wrote unit and integration tests using pytest and Postman, including security edge cases
- Used Django Debug Toolbar and structured logging for debugging and performance monitoring
- Participated in daily Agile standups, biweekly sprints, and weekly peer code reviews via GitHub
- Worked with deployment platforms like Heroku and Render, and configured environment variables securely
- Explored Swagger documentation and generated OpenAPI specs with drf-yasg

This role gave me hands-on experience with full-stack API development and taught me the importance of defensive coding and secure development practices, especially when handling user-generated content.

Onyi Gifting Platform, Remote Backend Developer

2025

- Designed and built modular RESTful APIs using **FastAPI**, following clean architecture and separation of concerns.
- Implemented **JWT-based authentication** with secure token refresh and revocation logic.
- Created logic to conditionally validate and redeem gifts based on type (gift card, playlist, ask-out, etc.).
- Added filters like `/gifts?status=pending` to support admin-level moderation and sorting.
- Used **PostgreSQL** with DBeaver for schema design, foreign key relations, and optimized querying.
- Integrated **Alembic** for schema versioning and migrations, ensuring consistent structure across dev/test/prod.
- Implemented Cloudinary support for uploading and serving images and audio tracks.
- Added server-side validation for file types, sizes, and transformation parameters.
- Built a `resend_gift` endpoint allowing admins to re-trigger WhatsApp or email delivery of pending gifts.
- Abstracted message-sending logic to enable future integration with SMS or push notification services.
- Wrote comprehensive tests using `pytest` and `httpx`, including test coverage for edge cases and API failures.
- Set up a **separate test database** using SQLite for fast isolated CI testing.
- Dockerized the app for local and cloud development using multi-stage Dockerfiles.
- Used Docker volumes for **persistent PostgreSQL storage**, improving developer workflow.
- Implemented detailed error logging and automatic response handling for 401s, validation errors, and unexpected exceptions.
- Built admin-only endpoints for updating gift status, managing users, and moderating messages.
- Added CORS configuration, HTTPS-ready endpoints, and environment-based config management.

Outlier, Remote
AI Prompt Engineer
2025

- **Engineered context-aware prompts for system diagnostics, session summaries, and troubleshooting guides**
- Designed reusable **prompt templates** for DevOps tasks and terminal-based instructions
- Tuned **OpenAI GPT-4** prompts for clarity, token efficiency, and technical accuracy
- Used **few-shot and zero-shot prompting** to scale templates across multiple use cases
- Integrated AI tools into support workflows, aiding non-technical users with backend logs
- Documented prompt logic, guidelines, and fallbacks for cross-team adoption.

Project Work

- **Onyi Gifting Platform (2025): Built a rich-media anonymous gifting**

system with FastAPI, JWT, Cloudinary, and Docker
- **Accessivo Financial Integrations (2025): Implemented airtime/data top-up (Topupbox, Clubkonnect) and bank transfer module (VFD MFB)**

Additional Experience & Affiliations

- **Accessivo Virtual Internship (2025):** Contributed to real-world Django-based applications as backend developer
- **Mathematics Research Assistant (Potential Future Role):** Ready to formalize proofs and design lecture materials

Awards and Certificates

- **Software Engineering Foundations** — Great Learning
  Completed November 2025
